Upcoming Webinars

Focused sessions of just 30 minutes!

Asset Tracking - Oct. 2

Capacity Management - Oct. 16

Asset Tracking, October 2, 10AM ET & 7PM ET

AiRISTA extends the value of your RTLS investment by integrating location insights into common workflows for BMET teams. The session will highlight good/better/best location accuracy and include demonstrations of workflow automation to driver productivity.

A Real ROI With RTLS-Enabled Patient Flow

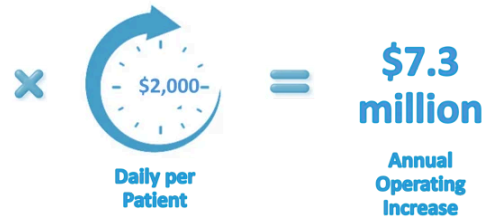

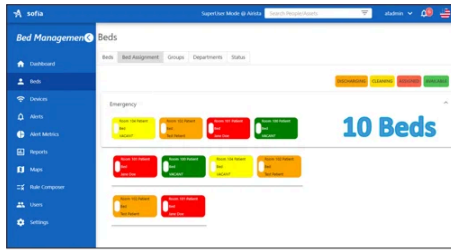

From admissions, to boarding, to transfers, to discharge – ensure a coordinated process

What if you could reduce the average patient stay by 4 hours, reduce ED boarding to less than 6 hours, or shave 35 minutes off the time it takes nurses to coordinate a transfer. These improvements not only help the profitability of healthcare providers, but they improve patient outcomes and can aid in staff retention.

Timely onboarding is a major issue in hospitals around the world. According to the [IHI](#), reducing ED boarding to under 6 hours reduced in-hospital mortality from 17.4% to 12.9% and reduced length of stay

A well orchestrated patient discharge workflow can save over 4 hours of what would otherwise be a soiled room left idle. According to the IHI, a 275-bed hospital that manages to reduce the average stay by just four hours will accomplish the “equivalent to increasing physical capacity by ten beds.” If the average daily patient cost is \$2,000, the hospital can increase its annual revenue by \$7.3million.

There are many opportunities to streamline the flow of patients inside a hospital. A few of the major areas for improvement are

- Wait times in admissions
- Delays in handling transfers
- Wasted time locating equipment
- Delays in patient discharge
- Arranging and completing environmental services

From the Contact Us form, add "Lunch on Us" to the section, Your Message.

5 Minute Demo: Patient Discharge

Got 5 Minutes? Watch this recording delivered from AiRISTA's Center of Excellence

Rooms can remain dirty for hours or days after the patient is discharged. See how RTLS-enabled workflows coordinate staff, patients, and equipment to eliminate inefficiency and makes the room available for the next patient quickly.
